MULTIPLE CARD READER, IDEAL FOR ANALYSIS BUREAU. Supports digiDL remote download.

Dedicated Digital Tachograph Company Card Reader

Solves the problem of hosting multiple cards

digicard-Hotel is an all in one solution for hosting up to 20 Digital Tachograph Company cards for the purposes of Remote Tachograph download.

This allows any analysis bureau supporting the digicentral platform to manage multiple customer's Company Cards. The net result is reduced support as there is no need to deal with the vagaries of a customer's network or to allow for user interference.

digicard Hotel has its own CPU running at 800mhz which supports a Linux operating system and the Tachosys custom platform.

Full management control

digicard Hotel can be plugged into the local network and by default will configure itself using DHCP.

The browser based management tools can be accessed locally or remotely depending on configuration. It is also possible to connect a standard digifob to the unit which acts as a simple keypad and screen. This is ideal for initial setup particularly if you require the use of a Static IP.

Connectivity and LED indicators

- Green LEDs on each card reader for status
- Two LEDs at front to indicate global status
- USB at front - update and configuration
- Power socket at rear
- 100 BaseT network port 10/100.

Updates files can be placed on a memory stick and are automatically detected and run via the USB port.

20 X Slots with Green LED indication for each card reader. Full management control.

Rack mount or free standing
